Education

University of Illinois Chicago — **Aug. 2025 – Aug. 2028 (Expected)**
PhD Student in Computer Science Advisor: Prof. Philip S. Yu — *Chicago, USA*

- **Tencent Project Up Scholarship** (4 recipients worldwide)

Zhejiang University — **Sep. 2022 – Mar. 2025**
MEng Computer Engineering Ranking: 1/82 — *Hangzhou, China*

- **National Scholarship for Graduate Students** ×**2** (Top 0.2%)
- Outstanding Graduate in Zhejiang Province & Zhejiang University

University of Leeds — **Sep. 2018 – Jun. 2022**
BSc Computer Science First Class Honours — *Leeds, United Kingdom*

- Best Student Overall (1/300); Best Student in Computer Science (1/75)
- First-class Full-ride Scholarship (1/75)

Southwest Jiaotong University — **Sep. 2018 – Jun. 2022**
BEng Computer Science and Technology Ranking: 1/75 GPA: 92/100 — *Chengdu, China*

- National Scholarship for Undergraduate Students (Top 0.2%)
- Outstanding Graduate in Sichuan Province

Internship

Google — **May 2026 – Present**
Student Researcher, Data Synthesis for Gemini and Long-Horizon GUI Agents — *Mountain View, California, US*

- **Training:** Synthesize large-scale, diverse **task queries and GUI trajectories** to strengthen **Gemini**'s GUI-agent capabilities.
- **Environment Synthesis:** Build **Android-based mock apps** with resettable backend state and verifiable outcomes for internal Android-agent evaluation.
- **Evaluation Data Synthesis:** Build **Mobile Skills Bench (MSB)**, a benchmark for long-horizon interactive mobile agents.
  - Synthesize verifiable, multi-stage cross-app tasks, paired with an interactive user simulator.
  - Benchmark frontier models on long-horizon tasks under both pure-GUI and hybrid (GUI + MCP + CLI) execution.
  - Design an efficient **skill organization** for mobile agents and quantify the value of textual vs. **multimodal skills**.

Alibaba Group — **May 2025 – Aug. 2025**
Research Intern, RL for Human-Agent Multi-turn Interaction — *Hangzhou, Zhejiang, China*

- Build scalable simulation environments for multi-turn human–agent tool-call interactions (e.g., retail and airline services), tackling sparse rewards, scarce data, and environment instability.
- Propose a **Tool Dependency Graph** that models tool constraints to synthesize high-quality multi-turn tool-call dialogues with ground-truth trajectories for verifiable rewards; train agents on these trajectories via multi-turn **GRPO**, improving long-horizon tool use in human–agent interaction.

Research Experience

Agent Security Bench (ASB) **ICLR 2025, First Author**

- **Motivation:** LLM agents extend LLM reasoning into real-world action: by calling tools, updating memory, and executing multi-step plans, they directly change external environments, making agent security more critical than standard AIGC safety; yet prior evaluations lacked a unified benchmark spanning prompts, tools, memory, and planning.
- **Contribution:** Introduce **the first fundamental agent security evaluation benchmark**, with 10 scenarios, 10 agents, 400+ tools, 27 attack/defense methods, 7 metrics, and Net Resilient Performance (NRP) for balancing utility and security.
- **Results:** Across 13 LLM backbones and 90,000+ test cases, reveal that current LLM agents remain highly vulnerable, with the highest average attack success rate reaching 84.30%, while existing defenses offer limited protection.

Towards Self-Evolving Skills in LLM Agents **CoEvoSkills (COLM 2026, First Author) & OpenSkill (EMNLP 2026)**

- **Motivation:** Agent skills can boost performance on professional tasks, but we identify a **human–machine misalignment**: human-curated skills are costly, and skills humans find helpful are not necessarily useful to agents, sometimes even hurting performance in SkillsBench domains; agents should therefore author their own skills.
- **Contribution:** Propose **CoEvoSkills**, which co-evolves multi-file skill packages with a surrogate verifier in closed-world settings, and **OpenSkill**, which self-evolves skills via open-world knowledge retrieval.
- **Results:** **CoEvoSkills** achieves a 71.1% average pass rate on SkillsBench (+40.5pp over no skills and +17.6pp over human-curated skills); **OpenSkill** reaches 43.6% with Claude Opus 4.6 and 42.1% with GPT 5.2, within 1–3pp of human-curated skills and about 9pp above the best closed-world baseline.

Open-Source Projects

Dr. Claw [Code] ∼1.2k GitHub stars · 130+ forks **EMNLP 2026 · Second Author · Core Contributor**

- Build an **Auto Research** workspace that orchestrates agentic pipelines from research ideation and literature/code survey to experiment execution, analysis, paper writing, and presentation generation.
- Integrate multi-source research news tracking, 100+ research skills, project/session management, and multi-agent backends into a full-stack research IDE.
